# Analytical Solutions to Fed-Batch Equations

Model setup, analytical solutions and data generation for fed-batch equations.

## **Model Setup**

#### Define Fed-Batch ODE System

```
FB = {
D[XV[\tau], \ \tau] == \mu \times XV[\tau], \ XV[0] == X0 \ V0,
D[PV[\tau], \ \tau] == \pi p \times XV[\tau], \ PV[0] == 0,
D[GV[\tau], \ \tau] == F[\tau] \times (Sf - GV[\tau]) - \sigma \times XV[\tau], \ GV[0] == 0,
D[V[\tau], \ \tau] == F[\tau], \ V[0] == V0
};
```

#### Normalization rules

```
norm = {
In[0]:=
                  V[\tau] \rightarrow V0 V[\tau]
                  V[0] \rightarrow V0 V[0]
                  V'[\tau] \rightarrow V \cup V'[\tau]
                  XV[\tau] \rightarrow V0 Sf Yxs xv[\tau],
                  XV[0] \rightarrow V0 Sf Yxs xv[0],
                  XV '[\tau] \rightarrow V0 Sf Yxs xv '[\tau],
                  X0 \rightarrow x0 Sf Yxs,
                  PV[\tau] \rightarrow V0 Sf Yxs pv[\tau],
                  PV[0] \rightarrow V0 Sf Yxs pv[0],
                  PV '[\tau] \rightarrow V0 Sf Yxs pv '[\tau],
                  GV[\tau] \rightarrow V0 Sf Yxs gv[\tau],
                  GV[0] \rightarrow V0 Sf Yxs gv[0],
                  GV '[\tau] \rightarrow V0 Sf Yxs gv '[\tau],
                  F[\tau] \rightarrow F0 f[\tau],
                  Finf → F0 Finf,
                  \mu \rightarrow F0/V0 \mu,
                  \gamma \rightarrow F0/V0\gamma
                  \pi\theta \rightarrow F\theta/V\theta \pi\theta,
                  \rho \rightarrow F0/V0\rho
                };
```

Apply normalization and set glucose mass balance to zero

```
FBnorm = Simplify[FB/. norm, {Sf > 0, V0 > 0, Yxs > 0}];
In[0]:=
        FBnormg0 = Simplify[FBnorm /. gv '[r] \rightarrow 0 /. gv[r] \rightarrow 0];
```

Solve glucose DE for the feed rate

$$In[\cdot]:= \text{sol} = \text{Solve}[Part[FBnormg0, 5], f[\tau]]$$

$$Out[\cdot]:= \left\{ \left\{ f[\tau] \rightarrow \frac{\text{V0 Yxs } \sigma \times \text{V}[\tau]}{\text{F0}} \right\} \right\}$$

Set up substrate consumption and production rate

$$In[\cdot]:= \begin{array}{l} \text{sigmaglc} = f[\tau] := (f[\tau] /. \text{ sol}[1]) \\ \text{sigmamu} = \sigma \rightarrow (\mu / \text{Yxs} + \pi p / \text{Yps} + \rho / \text{Yas}) /. \text{ norm} \\ \pi p = \pi 1 * \mu + \pi 0 /. \text{ norm} \\ \\ Out[\cdot]:= \begin{array}{l} f[\tau] := \frac{\text{V0 Yxs } \sigma \times \text{V}[\tau]}{\text{F0}} \end{array}$$

Out[-]= 
$$\sigma \rightarrow \frac{F0 \,\mu}{V0 \,Yxs} + \frac{\pi p}{Yps} + \frac{F0 \,\rho}{V0 \,Yas}$$

$$Out[\cdot] = \frac{F0 \pi0}{V0} + \frac{F0 \mu \pi1}{V0}$$

Solve substrate consumption rate for the growth rate  $\mu$ 

mu = Apart[Solve[sigmaglc /. sigmamu, 
$$\mu$$
]]  
mualpha = ExpandAll[mu /.  $(1/(Yps + \pi 1 Yxs)) \rightarrow \alpha/Yps$ ]  
{mu} = Simplify[mualpha /.  $\pi 0 Yxs/Yps \rightarrow \beta - \rho Yxs/Yas$ ]

$$Out[-] = \left\{ \left\{ \mu \to -\frac{\mathsf{Yxs} \left( \mathsf{Yas} \, \pi 0 + \mathsf{Yps} \, \rho \right)}{\mathsf{Yas} \left( \mathsf{Yps} + \mathsf{Yxs} \, \pi 1 \right)} + \frac{\mathsf{Yps} \, f[\tau]}{\left( \mathsf{Yps} + \mathsf{Yxs} \, \pi 1 \right) \, \mathsf{xv}[\tau]} \right\} \right\}$$

Out[s]= 
$$\left\{ \left\{ \mu \to -\frac{\mathsf{Yxs} \, \alpha \, \pi 0}{\mathsf{Yps}} - \frac{\mathsf{Yxs} \, \alpha \, \rho}{\mathsf{Yas}} + \frac{\alpha \, \mathsf{f[r]}}{\mathsf{xv[r]}} \right\} \right\}$$

$$Out[\cdot] = \left\{ \left\{ \mu \to -\alpha \beta + \frac{\alpha f[\tau]}{XV[\tau]} \right\} \right\}$$

#### **Feed Rates**

Define feed rates and apply normalization

```
logfeed = F[\tau] \rightarrow Finf/(1 + Exp[-\gamma \tau](Finf/F0 - 1))/. norm
           expfeed = F[r] → Limit[logfeed[2], Finf → Infinity];
           linfeed = F[\tau] \rightarrow Limit[Limit[logfeed[2], Finf \rightarrow Infinity], \gamma \rightarrow 0];
           feed = logfeed /. F0 f_{\rightarrow} f
Out[0]=
                      1 + e^{-\frac{F\Theta \gamma \tau}{V\Theta}} \left(-1 + Finf\right)
Out[o]=
                   \frac{1+e^{-\frac{F\theta}{V0}}}{1+Finf}
```

#### Solve ODE System

Solve ODEs, use DSolveChangeVariables to apply normalization

```
odexpv = Flatten[FullSimplify[Join[{FBnormg0[1;; 2]/. mu}/. feed,
 In[o]:=
                    {FBnormg0[3;; 4] /. mu} /. feed, FBnormg0[7;; 8] /. feed]]];
          DSolveChangeVariables[
              Inactive[DSolve][odexpv, {xv, pv, v}, r], {xvnew, pvnew, vnew}, t, t == r F0/V0];
          res = Activate[%];
          xvnew = xvnew /. First[res][2];
          pvnew = pvnew /. First[res][1];
          vnew = vnew /. First[res][3];
          xv[t] = xvnew[t]
          pv[t] = pvnew[t]
          v[t_] = vnew[t];
          x[t_] = xv[t]/v[t];
          \frac{1}{(-1 + \text{Finf})(\alpha \beta + \gamma)} e^{-t \alpha \beta} \left( -x0 \alpha \beta + \text{Finf} x0 \alpha \beta - x0 \gamma + \frac{1}{(-1 + \beta + \gamma)} \right)
Out[0]=
                Finf x0 \gamma - Finf \alpha Hypergeometric2F1[1, 1 + \frac{\alpha \beta}{\gamma}, 2 + \frac{\alpha \beta}{\gamma}, - \frac{1}{-1 + \text{Finf}}]+
                e^{\tan \beta + t \gamma} Finf \alpha Hypergeometric 2F1 \left[1, 1 + \frac{\alpha \beta}{\gamma}, 2 + \frac{\alpha \beta}{\gamma}, -\frac{e^{t \gamma}}{-1 + \text{Finf}}\right]
```

$$\frac{1}{(-1+\operatorname{Finf})\,\alpha\beta\,\gamma\,(\alpha\beta+\gamma)}$$

$$e^{-\operatorname{t}\alpha\beta}\left(\operatorname{x}0\,\alpha\beta\,\gamma\,\pi0-e^{\operatorname{t}\alpha\beta}\,\operatorname{x}0\,\alpha\beta\,\gamma\,\pi0-\operatorname{Finf}\,\operatorname{x}0\,\alpha\beta\,\gamma\,\pi0+e^{\operatorname{t}\alpha\beta}\,\operatorname{Finf}\,\operatorname{x}0\,\alpha\beta\,\gamma\,\pi0+\operatorname{x}0\,\gamma^2\,\pi0-e^{\operatorname{t}\alpha\beta}\,\operatorname{x}0\,\gamma^2\,\pi0-\operatorname{Finf}\,\operatorname{x}0\,\gamma^2\,\pi0-\operatorname{x}0\,\alpha^2\,\beta^2\,\gamma\,\pi1+e^{\operatorname{t}\alpha\beta}\,\operatorname{x}0\,\alpha^2\,\beta^2\,\gamma\,\pi1+\operatorname{Finf}\,\operatorname{x}0\,\alpha^2\,\beta^2\,\gamma\,\pi1+\operatorname{Finf}\,\operatorname{x}0\,\alpha^2\,\beta^2\,\gamma\,\pi1-\operatorname{x}0\,\alpha\beta\,\gamma^2\,\pi1+\operatorname{E}^{\operatorname{t}\alpha\beta}\,\operatorname{x}0\,\alpha^2\,\beta^2\,\gamma\,\pi1+\operatorname{Finf}\,\operatorname{x}0\,\alpha\beta\,\gamma^2\,\pi1-e^{\operatorname{t}\alpha\beta}\,\operatorname{Finf}\,\operatorname{x}0\,\alpha\beta\,\gamma^2\,\pi1+\operatorname{Finf}\,\operatorname{x}0\,\alpha\beta\,\gamma^2\,\pi1+\operatorname{Finf}\,\operatorname{x}0\,\alpha\beta\,\gamma^2\,\pi1+\operatorname{Finf}\,\operatorname{x}0\,\alpha\beta\,\gamma^2\,\pi1+\operatorname{Finf}\,\operatorname{x}0\,\alpha\beta\,\gamma^2\,\pi1+\operatorname{Finf}\,\operatorname{x}0\,\alpha\beta\,\gamma^2\,\pi1+\operatorname{Finf}\,\operatorname{x}0\,\alpha\beta\,\gamma^2\,\pi1+\operatorname{Finf}\,\operatorname{x}0\,\alpha\beta\,\gamma^2\,\pi1+\operatorname{Finf}\,\operatorname{x}0\,\alpha\beta\,\gamma^2\,\pi1+\operatorname{Finf}\,\operatorname{x}0\,\alpha\beta\,\gamma^2\,\pi1+\operatorname{Finf}\,\operatorname{x}0\,\alpha\beta\,\gamma^2\,\pi1+\operatorname{Finf}\,\operatorname{x}0\,\alpha\beta\,\gamma^2\,\pi1+\operatorname{Finf}\,\operatorname{x}0\,\alpha\beta\,\gamma^2\,\pi1+\operatorname{Finf}\,\operatorname{x}0\,\alpha\beta\,\gamma^2\,\pi1+\operatorname{Finf}\,\operatorname{x}0\,\alpha\beta\,\gamma^2\,\pi1+\operatorname{Finf}\,\operatorname{x}0\,\alpha\beta\,\gamma^2\,\pi1+\operatorname{Finf}\,\operatorname{x}0\,\alpha\beta\,\gamma^2\,\pi1+\operatorname{Finf}\,\operatorname{x}0\,\alpha\beta\,\gamma^2\,\pi1+\operatorname{Finf}\,\operatorname{x}0\,\alpha\beta\,\gamma^2\,\pi1+\operatorname{Finf}\,\operatorname{x}0\,\alpha\beta\,\gamma^2\,\pi1+\operatorname{Finf}\,\operatorname{x}0\,\alpha\beta\,\gamma^2\,\pi1+\operatorname{Finf}\,\operatorname{x}0\,\alpha\beta\,\gamma^2\,\pi1+\operatorname{Finf}\,\operatorname{x}0\,\alpha\beta\,\gamma^2\,\pi1+\operatorname{Finf}\,\operatorname{x}0\,\alpha\beta\,\gamma^2\,\pi1+\operatorname{Finf}\,\operatorname{x}0\,\alpha\beta\,\gamma^2\,\pi1+\operatorname{Finf}\,\operatorname{x}0\,\alpha\beta\,\gamma^2\,\pi1+\operatorname{Finf}\,\operatorname{x}0\,\alpha\beta\,\gamma^2\,\pi1+\operatorname{Finf}\,\operatorname{x}0\,\alpha^2\,\beta^2\,\gamma^2\,\pi1+\operatorname{Finf}\,\operatorname{x}0\,\alpha^2\,\beta^2\,\gamma^2\,\pi1+\operatorname{Finf}\,\operatorname{x}0\,\alpha^2\,\beta^2\,\gamma^2\,\pi1+\operatorname{Finf}\,\operatorname{x}0\,\alpha^2\,\beta^2\,\gamma^2\,\pi1+\operatorname{x}0\,\alpha^2\,\beta^2$$

Simplify product and volume solutions

Finf  $\pi 0 \left( -\log[\text{Finf}] + \log[-1 + e^{t \gamma} + \text{Finf}] \right)$ 

 $\beta \gamma$ 

Out[o]=

```
logTerms = Select[Collect[Expand[pv[t]], Log], ! FreeQ[#, Log] &]
       In[0]:=
                                                                                                      FullSimplify[logTerms]
                                                                                                      pv01[t_] = Expand[pv[t]] /. logTerms \rightarrow %

Apply log(a)-log(b)=log(a/b) to product

$$\begin{aligned} & \text{pv02[t]} = \text{Simplify[pv01[t]} / \cdot \left( -\text{Log[Finf]} + \text{Log}[-1 + e^{\text{t} \gamma} + \text{Finf}] \right) \rightarrow \text{Log[(Exp[\gamma t] - 1) / Finf} + 1]]; \\ & \text{pv[t]} = \text{pv02[t]}; \\ & \text{p[t]} = \text{pv[t]} / \text{v[t]} \end{aligned}$$

$$\begin{aligned} & \text{Out[\cdot]} = \\ & \left( e^{-\text{t} \alpha \beta} \left( \text{Finf} \alpha \gamma \left( \pi 0 - \alpha \beta \pi 1 \right) \text{Hypergeometric2F1[1, } 1 + \frac{\alpha \beta}{\gamma} , 2 + \frac{\alpha \beta}{\gamma} , \frac{1}{1 - \text{Finf}} \right) + \\ & e^{\text{t} \left( \alpha \beta + \gamma \right)} \text{Finf} \alpha \gamma \left( -\pi 0 + \alpha \beta \pi 1 \right) \text{Hypergeometric2F1[1, } 1 + \frac{\alpha \beta}{\gamma} , 2 + \frac{\alpha \beta}{\gamma} , -\frac{e^{\text{t} \gamma}}{-1 + \text{Finf}} \right) + \\ & \left( -1 + \text{Finf} \right) \left( \alpha \beta + \gamma \right) \left( \left( -1 + e^{\text{t} \alpha \beta} \right) \times 0 \gamma \left( \pi 0 - \alpha \beta \pi 1 \right) + e^{\text{t} \alpha \beta} \text{Finf} \alpha \pi 0 \text{Log} \left[ \frac{-1 + e^{\text{t} \gamma} + \text{Finf}}{\text{Finf}} \right] \right) \right) / \\ & \left( \left( -1 + \text{Finf} \right) \alpha \beta \left( \alpha \beta + \gamma \right) \left( \gamma - \text{Finf Log[Finf]} + \text{Finf Log} \left[ -1 + e^{\text{t} \gamma} + \text{Finf} \right] \right) \right) \end{aligned}$$

Apply  $\log (a) - \log (b) = \log (a/b)$  to volume

### Analytical solutions for exponential feed

Define functions for exponential feed by setting Finf to infinitiy

```
vexp[t_] = Limit[v[t], Finf → Infinity]
                  xvexp[t_] = Limit[xv[t], Finf → Infinity]
                  xexp[t_] = xvexp[t]/vexp[t];
                  pvexp[t_] = Limit[pv[t], Finf → Infinity]
                  pexp[t_] = pvexp[t]/vexp[t];
                   -1 + e^{t y} + y
Out[0]=
                  e^{-\mathsf{t} \alpha \beta} \left( \alpha \left( -1 + e^{\mathsf{t} \left( \alpha \beta + \gamma \right)} + \mathsf{x0} \beta \right) + \mathsf{x0} \gamma \right)
Out[0]=
                   e^{-t \alpha \beta} \gamma \left( \alpha \left( -1 + e^{t (\alpha \beta + \gamma)} + \times 0 \beta \right) + \times 0 \gamma \right)
Out[0]=
Out[0]=
                      \left(-\alpha\gamma\left(-\pi\Theta+\alpha\beta\pi\mathbf{1}\right)+e^{\pm\left(\alpha\beta+\gamma\right)}\alpha\gamma\left(-\pi\Theta+\alpha\beta\pi\mathbf{1}\right)+\left(\alpha\beta+\gamma\right)\left(e^{\pm\alpha\beta}\left(-\mathbf{1}+e^{\pm\gamma}\right)\alpha\pi\Theta+\left(-\mathbf{1}+e^{\pm\alpha\beta}\right)\times\Theta\gamma\left(\pi\Theta-\alpha\beta\pi\mathbf{1}\right)\right)\right)
```

## Analytical solutions for constant feed

Define functions for constant feed rate by setting Finf to 1. Use PowerExpand to apply  $Log(e^x)=x$ 

```
vlin[t_] = PowerExpand[v[t] /. Finf → 1]
In[0]:=
        1 + t
Out[0]=
```

```
FullSimplify[Limit[PowerExpand[xv[t]], Finf \rightarrow 1, Direction \rightarrow -1]]
 In[0]:=
             xvlin[t_] = Normal[%];
             xlin[t_] = xvlin[t] / vlin[t]
               \frac{1 + e^{-t \alpha \beta} (-1 + x0 \beta)}{\beta} \quad \text{if } \quad condition | +
Out[0]=
              1 + e^{-t \alpha \beta} \left(-1 + x0 \beta\right)
Out[0]=
                        (1 + t) \beta
             PowerExpand[FullSimplify[Limit[PowerExpand[pv[t]], Finf \rightarrow 1, Direction \rightarrow -1]]]
 In[0]:=
             pvlin[t_] = Normal[%];
             plin[t_] = pvlin[t] / vlin[t]
                                                                                if condition +
Out[0]=
              \mathsf{t}\,\beta\,\pi\mathsf{0} + \frac{e^{-\mathsf{t}\,\alpha\beta}\left(-1 + e^{\mathsf{t}\,\alpha\beta}\right)\left(-1 + \mathsf{x}\,\mathsf{0}\,\beta\right)\left(\pi\,\mathsf{0} - \alpha\,\beta\,\pi\,\mathsf{1}\right)}{-1}
Out[0]=
                                      (1 + t) \beta^2
```

### Data generation

## Prepare for data creation and export

Setup filenames, data directory and yield values

```
datadir = "~/fedbatch/data/";
In[0]:=
      fileNames = {"x01", "x02", "x03", "x04", "x05", "x06", "x07"};
      Yieldxs = Yxs → 0.022;
      Yieldpx = Ypx → 69.3;
      Yieldas = Yas → 2;
      Yieldpa = Ypa → 1;
```

Calculate Product-Substrate Yield

```
In[-]:=
        Yieldps = Yps → Yxs Ypx Yas Ypa /. Yieldxs /. Yieldpx /. Yieldas /. Yieldpa
        Yps \rightarrow 3.0492
Out[0]=
```

Use  $\alpha$  and  $\beta$  for simplification, define production rates for each case

```
\alpha \rightarrow (1/(1+\pi 1 \text{ Yxs/Yps}))/. \text{ Yieldxs/. Yieldps/. Yieldas}
 In[0]:=
           \beta \rightarrow (\pi 0 \text{ Yxs/Yps} + \rho \text{ Yxs/Yas}) /. \text{ Yieldxs /. Yieldps /. Yieldas}
Out[0]=
                  1 + 0.00721501 \pi 1
           \beta \rightarrow 0.00721501 \,\pi 0 + 0.011 \,\rho
Out[-]=
```

Set alpha1 and beta 1 for  $\alpha$ =1 and  $\beta$ =0 (no production)

```
\alpha \rightarrow (1/(1+\pi 1 \text{ Yxs/Yps}))/. \text{ Yieldxs/. Yieldps/. Yieldas/. } \pi 1 \rightarrow 0;
 In[0]:=
            alpha1 = %
            \beta \rightarrow (\pi 0 \text{ Yxs/Yps} + \rho \text{ Yxs/Yas}) /. \text{ Yieldxs/. Yieldps/. Yieldas/. } \pi 0 \rightarrow 0 /. \rho \rightarrow 0;
            beta1 = %
Out[0]=
            \alpha \to 1 .
Out[-]=
            \beta \rightarrow 0 .
```

 $\alpha$ =0.8 and  $\beta$ =0

```
\alpha \rightarrow (1/(1+\pi 1 \text{ Yxs/Yps}))/. \text{ Yieldxs/. Yieldps/. Yieldas/.} \pi 1 \rightarrow 30
 In[0]:=
            \beta \rightarrow (\pi 0 \text{ Yxs/Yps} + \rho \text{ Yxs/Yas}) /. \text{ Yieldxs/. Yieldps/. Yieldas/.} \pi 0 \rightarrow 0 /. \rho \rightarrow 0
             \alpha \rightarrow 0.822064
Out[0]=
            \beta \rightarrow 0 .
Out[0]=
```

 $\alpha$ =1 and  $\beta$ =0.3

```
\alpha \rightarrow (1/(1+\pi 1 \text{ Yxs/Yps})) /. Yieldxs /. Yieldps /. Yieldas /. \pi 1 \rightarrow 0
 In[o]:=
            \beta \rightarrow (\pi 0 \text{ Yxs/Yps} + \rho \text{ Yxs/Yas}). Yieldxs/. Yieldps/. Yieldas/. \pi 0 \rightarrow 20/. \rho \rightarrow 10
Out[0]=
            \alpha \rightarrow 1.
            \beta \rightarrow 0.2543
Out[-]=
```

Set alpha2 and beta2 for  $\alpha$ =0.8 and  $\beta$ =0.3 (growth-coupled and growth-decoupled production)

```
\alpha \rightarrow (1/(1+\pi 1 \text{ Yxs/Yps})) /. Yieldxs /. Yieldps /. Yieldas /. \pi 1 \rightarrow 30;
 In[o]:=
             alpha2 = %
            \beta \rightarrow (\pi 0 \text{ Yxs/Yps} + \rho \text{ Yxs/Yas}) /. \text{ Yieldxs } /. \text{ Yieldps } /. \text{ Yieldas } /. \pi 0 \rightarrow 20 /. \rho \rightarrow 10;
             beta2 = %
            \alpha \rightarrow 0.822064
Out[0]=
            \beta \rightarrow 0.2543
Out[-]=
```

Set production rates for each case

```
pi01 = \pi0 \to 0;
In[o]:=
           pi02 = \pi0 \rightarrow 20;
           pill = \pi 1 \rightarrow 0;
           pi12 = \pi1 \rightarrow 30;
           rho = \rho \rightarrow 10;
```

Vary values of initial biomass concentration

```
xValues = {x1, x2, x3, x4, x5, x6, x7};
x1 = x0 \rightarrow 0.001;
x2 = x0 \rightarrow 0.0022;
x3 = x0 \rightarrow 0.0047;
x4 = x0 \rightarrow 0.01;
x5 = x0 \rightarrow 0.022;
x6 = x0 \rightarrow 0.047;
x7 = x0 \rightarrow 0.1;
```

Define feed functions for export

```
flog[t_] = f\left[\frac{\text{t V0}}{\text{F0}}\right] /. (feed /. \tau \rightarrow \text{t V0/F0});
fexp[t_] = Limit[flog[t], Finf → Infinity];
flin[t_] = flog[t] /. Finf \rightarrow 1;
```

### Create and export data

Feed and Volume data for each feed rate with  $\gamma$ =0.7 and Finf=2 from 0-20 t

```
Vlog = Table[{t, v[t] /. \gamma → 0.7 /. Finf → 2}, {t, 0, 20, 0.1}];
       Vexp = Table[\{t, \text{vexp[t]} / . \gamma \rightarrow 0.7\}, \{t, 0, 20, 0.1\}];
       Vlin = Table[{t, vlin[t]}, {t, 0, 20, 0.1}];
       VTable = Transpose[{Vlog[All, 1], Vlog[All, 2], Vexp[All, 2], Vlin[All, 2]};
       Export[FileNameJoin[{ToFileName[datadir], "Vcombined.csv"}], VTable, "CSV"]
       ~/fedbatch/data/Vcombined.csv
Out[-]=
```

```
Flog = Table[\{t, flog[t] / . y \rightarrow 0.7 / . Finf \rightarrow 2\}, \{t, 0, 20, 0.1\}];
In[0]:=
       Fexp = Table[\{t, fexp[t] / . \gamma \rightarrow 0.7\}, \{t, 0, 20, 0.1\}];
       Flin = Table[{t, flin[t]}, {t, 0, 20, 0.1}];
       FTable = Transpose[{Flog[All, 1], Flog[All, 2], Fexp[All, 2], Flin[All, 2]];
       Export[FileNameJoin[{ToFileName[datadir], "Fcombined.csv"}], FTable, "CSV"]
       ~/fedbatch/data/Fcombined.csv
Out[0]=
```
